

# Aleh Manchuliantsau

Founding GTM / Product Operator · AI-Native

7-time Founder · 2 Exits · \$10M+ Raised · 10+ Patents · Techstars & SOSV Alum

San Francisco, CA · [o.manchuliantsev@gmail.com](mailto:o.manchuliantsev@gmail.com) · 650.713.1091 · <https://www.linkedin.com/in/manchuliantsau/>

## What I'm Looking For

---

Founding role (GTM / Product / BD) at an AI-native B2B startup, Seed–Series A, in San Francisco. Comfortable owning the question “**Why should we build this?**” end-to-end—from evidence to product to first \$1M ARR.

## Quantified Highlights

---

- **\$0 → \$5M revenue (bootstrap)** at 100%FOOD;
- **\$0 → \$6M (bootstrap)** at MOBYS Group (150 employees managed).
- **\$10M+ raised** from accelerators (Techstars), deep tech VC (SOSV) and industry partners.
- **AB InBev:** closed strategic investment + global supply agreement at Planetarians.
- **Nash Compass PMF:** 78.7% install conversion, 73% data uploads, 55.6% post-result registrations across 202 users.
- **AI Customs:** paying design partner + 2 live products in 6 weeks.
- **10+ patents** across food upcycling, fermentation, and materials science; coverage through 2041.

## Core Strengths

---

- **AI-Native Builder.** Ship paying-customer products in days using Claude Code / Codex. Recent: Nash Compass (PMF tested with 202 users), AI Customs (paying design partner, \$1.8K MRR), Mastermind Handshake (rigorous experiment design with go/no-go gates).
- **0-to-1 Commercial Operator.** Twice took products from \$0 to \$5M–\$6M revenue. Closed enterprise B2B with AB InBev. 2–4× sales velocity vs category at Planetarians; 72% acceptance in schools & foodservice.
- **Quantitative PMF Discipline.** Design PMF tests with benchmarked gates and decision rules. Translate raw user behavior into investor-credible proof paths and next-phase milestones.
- **Capital Strategy & Narrative.** \$10M+ raised across venture and bootstrap paths. Investor updates, board packs, diligence data rooms, metric-story fit.
- **Deep Tech Commercialization.** Translate complex R&D (AI, climate tech, bioprocesses) into fundable unit economics (\$0.42/lb COGS validated) and defensible IP.

## Recent Builds (2025–2026)

---

- **AI Customs** — Multi-agent customs SaaS replacing legacy systems on Lithuania/Russia border. 1 paying design partner (CDEK franchisee), 2 live products, customer requested full replacement of CDEK Forward legacy system. Built first product in week 1.
- **Nash Compass** — On-device AI companion applying game theory to daily decisions. Designed PMF test plan; validated core hypothesis with 202 users at 3× industry benchmarks across all three gates.
- **Agent Risk Score** — Strategic one-pager + GTM for trust infrastructure in agentic economy (Agent Passport + Risk Score + Insurance Wrapper). 86% CEO buy-in at Techstars validation; 1 LOI signed; Munich Re dialogue initiated.

## Experience

---

### **Chief of Staff — Dynamic Resonance AI** Sep 2025 – Present

*San Francisco, CA · Designed, built, and executed GTM for multiple AI agents. Explored boundaries for AI-native applications using Claude Code and established identity layers for AI agents.*

- **Rezonymr** — AI Operating Planner for Startup Teams
- **AI Heat Companion** — Voice-First Elder Wellness Check-In AI
- **Personal MCP with Taste Engine** — Identity Layer for AI Agents
- **Sunrays.Dev** - MCP-as-a-Service for Local Service Businesses
- **My Protocol** — AI-Assisted Founder Advice Exchange

### **Founder & CEO — SpyGlass AI** Feb 2025 – Aug 2025 (acquired)

*AI platform for rapid CPG reformulation and virtual testing from upcycled ingredients*

- Defined reformulation strategy targeting 15% lower COGS / 25% better-for-you profiles; prioritized 10 × \$1B opportunity spaces.
- Built experiment pipeline and quant gates; produced investor-grade messaging and metrics.

### **Founder & CEO — Planetarians** Jun 2015 – Aug 2025

*San Francisco, CA · Climate tech: industrial food by-product valorization via patented processes*

- **Strategic partnership:** secured investment and global supply agreement with AB InBev.
- **Unit economics:** validated \$0.42/lb COGS and \$3.35M CapEx at commercial scale (Hayward, CA).
- **GTM & traction:** 2–4× sales velocity vs category through price-value strategy; 72% acceptance in schools & foodservice.
- **Impact:** products with 50× lower carbon footprint than animal meat (10× better than many plant-based alternatives).
- **IP:** patented processes and products (coverage through 2041); pioneered solid-state fermentation for oilcakes and brewer's yeast valorization.
- **Comms & fundraising:** led investor updates, board packs, diligence data room; aligned narrative with metrics and runway.

### **Founder & CEO — 100%FOOD by Space Nutrients Station** Jan 2014 – Jun 2015

*San Jose, CA · Nutritionally complete RTD meal (pivoted into Planetarians)*

- Bootstrapped to \$5M revenue with 1,000,000+ servings sold.
- Scaled manufacturing to co-manufacturers and 3PL.

### **Founder & CEO — USARIUM** Dec 2012 – Dec 2013

*Palo Alto, CA · P2P consumer rentals (iOS)*

- Shipped iOS app; tested with 17,000 users. Declined next round due to insufficient path to returns—learned the behavior–intent gap (social brag > transactions).

### **Founder & CEO — Open Innovation Inc. / Thinking Club** Nov 2010 – Aug 2013

*Moscow → relocated to the US · Crowdsourcing platform with built-in TRIZ methodology*

- Ran open-innovation programs and contests for Aeroflot, Google, and 20 university incubators.

### **Founder & CEO — Solar-Si JSC** 2007 – 2011 (exited)

*Moscow · Spherical solar-grade silicon at up to 3× lower production cost*

- Developed product and manufacturing technology; filed patents in US/EU + 20 countries; raised \$2M Round A for scaling.

### **Founder & CEO — MOBYS Group** Aug 1998 – Jul 2006

*Moscow · BTL agency for mobile/portable displays (converted into partnership)*

- Developed and patented 3 types of portable displays; launched design, manufacturing, and sales.
- Bootstrapped \$0 → \$6M revenue; managed 150 people across multiple divisions.

## Programs & Education

---

- **GStack by Garry Tan (2026)** — 1:1 work on YC application thesis, customs wedge validation, and founder mindset. Written feedback documented “structural thinking above session lead level” on product decisions; cited as rare in evidence-to-vision ordering.
- **Techstars Accelerator (2017)** — Raised \$295K at Demo Day.
- **Food-X by SOSV, Cohort 08 (2018)** — Raised \$750K at Demo Day.
- **Moscow School of Management SKOLKOVO (2013)** — Winner of Startup Academy.
- **Boston University (2006)** — Technology Commercialization.
- **International Institute of Management, Business & Law (1994–1997)** — B.S. Marketing.

## Patents & IP

---

- 10+ patents spanning food upcycling, fermentation processes, and materials science. Coverage includes processes through 2041. Filed in US/EU + 20 countries.

## Capabilities (outcome-shaped)

---

- **Close first 5–10 enterprise / design-partner customers from cold** (AB InBev, CDEK, Aeroflot, Google).
- **Validate PMF with quantified, benchmarked gates** (Nash Compass: 78.7% / 73% / 55.6% — all 3× bench).
- **Ship MVPs in days using Claude Code / Codex** (AI Customs paying customer in week 1).
- **Raise capital with metric-aligned narrative** (\$10M+ raised across 4 companies; 2 Demo Days).
- **Structure 0-to-1 deals with strategics** (AB InBev investment + supply; Munich Re dialogue).
- **Design experiments with go / no-go decision rules** (Mastermind Handshake supply-side honesty test + behavioral reciprocity ledger).

## Selected Current Projects

My current work is focused on the next layer of the internet: **persistent AI agents representing people and businesses through structured, machine-readable context.**

The industry is moving from heavy wrappers around weak LLMs to thin harnesses around increasingly capable models. At the same time, agents are shifting from tools users manually invoke into cloud-based systems that remain active, remember context, monitor opportunities, and act on behalf of their owners.

I believe the next major platform shift will be protocol-driven. Every business and person will need an MCP-like interface that exposes their capabilities, needs, constraints, reputation, preferences, and permissions to other agents. The agentic internet will let personal and business agents perform that discovery, negotiation, filtering, and execution directly.

This would cut the intermediaries out as Amazon, Airbnb, and Uber did with prior incumbents.

My projects explore the infrastructure required for that transition: trust and risk scoring for agents, personal MCP identity layers, agent-visible business profiles, AI-native workflow automation, compliance agents, and human-in-the-loop operating systems.

### **Dynamic Resonance — AI-Native Customs & Logistics Platform**

Working on an AI-native “Cursor for Customs” platform that automates HS code classification and expands into declaration drafting, compliance checks, document generation, and broader cross-border operations. The system uses multi-agent classification, verification, conflict resolution, and human review to reduce manual document work from a major part of the workflow to a controlled review step. The project has a paying design partner, two live SaaS products, and early revenue from HS classification and info-letter generation.

### **Rezonym — AI Operating Planner for Startup Teams**

Designing an AI planning system that turns company memory, customer signals, prior experiments, goals, and team capacity into ranked weekly execution scenarios. Rezonym produces hypotheses, expected outcomes, kill-switches, pivots, capacity-aware assignments, risk mitigations, and an audit trail, positioning it as a memory-grounded operating planner rather than another task tracker or chatbot.

### **AI Heat Companion — Voice-First Elder Wellness Check-In AI**

Building a software-only voice companion for adult children who worry about remote aging parents during extreme heat. The product uses proactive phone calls, conversational onboarding, personal memory, weather context, and family alerts. The design reframes “heat stroke detection” as a personal anomaly detection system using voice, heat context, cognitive probes, and tiered escalation rather than medical diagnosis.

### **Agent Risk Score — Trust Layer for the Agentic Economy**

Developing a trust, scoring, and control layer for autonomous agents. The concept combines Agent Passport, dynamic Risk Score, and Insurance/Guarantee Wrapper to make agents verifiable, accountable, and insurable. Initial wedge targets Shopify merchants using AI support bots, with a free risk scan, bot-controller layer, and guarantee for policy-violating actions such as incorrect refunds or discounts.

### **Personal MCP with Taste Engine — Identity Layer for AI Agents**

Exploring Personal MCP as a machine-readable identity and preference layer for the agent era. The product direction shifts MCP from technical infrastructure into a consumer identity product: a profile builder and taste engine that captures what a person offers, wants, values, restricts, and prefers, then exposes it to agents through a structured endpoint.

### **MCP-as-a-Service for Local Service Businesses**

Designing a vertical wedge that makes plumbers and other local service providers visible, comparable, and bookable by buyer-side AI agents. The MVP combines a 24/7 intake agent, structured MCP business profile, and lightweight dashboard so service providers can capture bookings they currently lose while working or sleeping.

### **My Protocol — AI-Assisted Founder Advice Exchange**

Designing a structured trust-handshake product that lets warm contacts ask one bounded question to a founder's mastermind profile, receive a human-reviewed AI-assisted answer, and optionally create their own reciprocal profile. The MVP tests whether structured async advice can replace low-signal intro calls while preserving trust, privacy, and answer quality.
